Skin health. A longer perspective.

Koppā is a science-led skincare brand built around GHK-Cu, a clinically studied copper peptide. The Koppā Protocol brings it into three purposeful formulas: a 2% serum, a capsule-delivery cream and a face-and-body balm stick. Built for real people, with a routine short enough to keep. Our focus is skin health and longevity, without false promises.

Brand at a glance

Pronunciation

kohp-pah. A short o, with a brief pause before pah.

Category

Science-led skincare, built around copper peptides.

Hero ingredient

GHK-Cu (Copper Tripeptide-1), a copper-bound tripeptide studied in skin research.

Philosophy

Skin longevity over false promises. Skin health over miracle ingredients. A routine short enough to keep.

The Protocol

Three formats: a 2% GHK-Cu serum, an advanced capsule cream and a face-and-body balm stick.

Availability

Three formats. One connective ingredient.

GHK-Cu 2% High Potency Serum

45 ml / Face

A considered 2% GHK-Cu formula: a focused first step for skin that looks smoother and feels well cared for. We chose this concentration deliberately; more is not automatically better. Light, fresh and water-based, it absorbs without an oily finish. Its natural blue comes from the peptide bound to copper, not added colour.

GHK-Cu Advanced Capsule Cream

80 g / Face + neck

Comforting moisture with a deliberate delivery system. The visible blue microcapsules contain GHK-Cu, keeping the active separate within the cream to help protect its stability until you massage it into skin. The capsules release as the cream is worked in. They are a delivery format, not an exfoliant. The result is nourishing moisture and support for the skin barrier.

GHK-Cu Face + Body Balm Stick

20 g / Face + body

Copper peptide care in a distinctive, portable format. This waterless balm pairs GHK-Cu with rich moisture for dry-feeling areas on the face and body. Glide it over cheeks, hands, elbows or wherever skin needs extra comfort. It helps seal in moisture as the final step of your routine, and is easy to take with you for care on the go.

Research and formulation

GHK-Cu ingredient research is not a clinical trial of a finished Koppā product. Published references and full ingredient lists are available on our science and product pages. For substantiation or technical detail, contact the team.
